Texas Instruments 857	TI 857
Blue Chip M120/10	M120/10 Blue Chip
Panasonic KX-P1080	KX-P1080 Panasonic

- * 16 pin mode (8 pin mode where available)
- ** 24 pin mode (8 pin mode where available)
- *** Use full 15" carriage and printer paper. Printout will exceed one page.

- Select the appropriate printer from the list as shown above table.
- Be sure to "Select Options" also in Printer Setup. This will allow you to set line feeds, printer device number, and secondary address. If you are unsure what these are please consult your printer/interface manuals. Please ignore the slot number option as it has no effect on this version.
- The secondary address should be 'transparent with no line feeds' (usually 5, the default). Commodore printers should be 0. If no secondary transparent mode is available set Interface on transparent mode.
- Most printer/interfaces are device number 4.
- "Test Printer" should be done at this time using the 576 x 576 Squariness Test. This should print a 8 x 8 inch square. Only the four corners and the left edge are actually printed to save time.

- If the printout is NOT 8 x 8 inch square then the wrong printer driver was selected.
- If the square has white spaces between lines you may have chosen the wrong printer driver or the line feeds are set wrong.
- After the printer has been setup **BE SURE TO "SAVE CHANGES" BEFORE CONTINUING.**
- After your printer is setup correctly and you have SAVED THE CHANGES "Exit to AwardWare" and you can start creating awards. See your manual for further instructions. You will NOT have to do Printer Setup again unless you change printers.
