STEPS FOR PRINTNG OUT DAISY-DOT II DOCUMENTATION

Daisy-Dot II has 24 pages of documentation designed to be printed with Daisy-Dot II. The printing process takes a very long time. Remember that for donations of $10 and above, one will receive the DDII disk and PRINTED documentation. Send to:

        Roy Goldman
        2440 South Jasmine
        Denver, CO 80222

Here are the steps to print all the documentation:

1) If you are using a Star Gemini/SG, first rename the file on Side 1 "STAR.CNF" to "STAR"
2) If you are using an Epson MX III printer, rename the file on Side 1 "MX.CNF" to "MX". Since the MX doesn't support all graphic densities, some demonstrations of the different densities in the documentation won't print out accurately
3) Boot Side 1 of the Daisy-Dot II disk
4) Type "ROMAN" and [RETURN]
5) Type "DDIIDOC.1" and [RETURN]
6) Make sure you've got at least 25 pages of paper
7) Position Top Of Form by advancing paper until the page perforation lines up with the top of the printer ribbon
8) Turn on printer
9) Press [START]. The first 11 pages of the documentation will print
10) When finished, flip the disk and insert Side 2
11) Press "T"
12) Type "DDIIDOC.3" and [RETURN]
13) Press [START] to print the rest of the documentation

You can abort a printout at any time by holding down [SELECT]
